Task 2 — Lock Object in CorelDRAW

Four button shapes (Rectangle, Ellipse, Polygon, Star) are drawn, two are locked, and all four are then dragged to observe which ones actually move.

Step-by-step workflow

1. Draw the 4 shapes with the Rectangle, Ellipse, Polygon and Star tools, and style each as a UI button (fill colour + label text) — PLAY, PAUSE, LIKE, SHARE.

2. Select the Rectangle (PLAY) and the Polygon (LIKE). Go to Object ▸ Lock ▸ Lock Object, or right-click ▸ Lock Object. A small padlock icon appears on each locked shape.

3. Leave the Ellipse (PAUSE) and the Star (SHARE) unlocked.

4. Select all four shapes (Ctrl+A or marquee) and try dragging them all to the right at once.

5. Observe: the locked Rectangle and Polygon stay exactly in place — CorelDRAW won't move, resize, or edit a locked object until it is unlocked. The unlocked Ellipse and Star move freely with the drag.

6. To move a locked shape again, select it and go to Object ▸ Lock ▸ Unlock Object (or right-click ▸ Unlock Object).

Step 1 — Draw the 4 Button Shapes

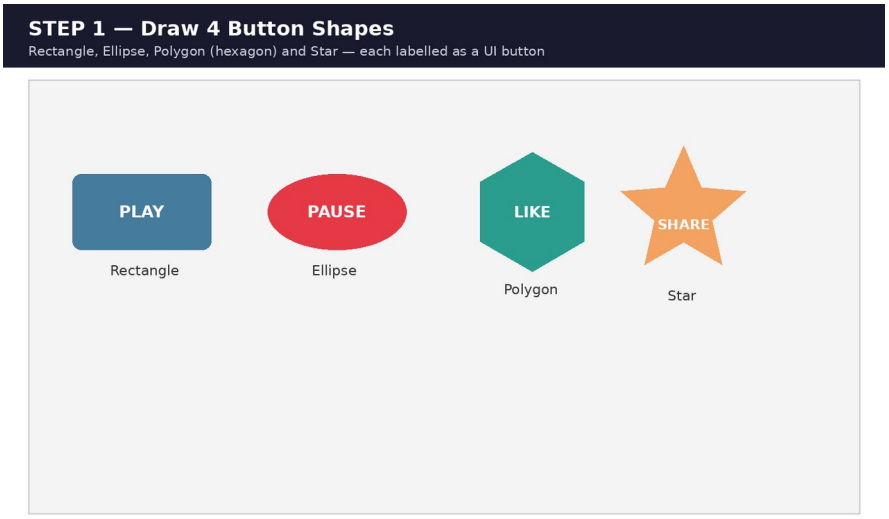

Fig 2.1 — Rectangle, Ellipse, Polygon (hexagon) and Star drawn as coloured buttons.

Step 2 — Lock the Rectangle and the Polygon

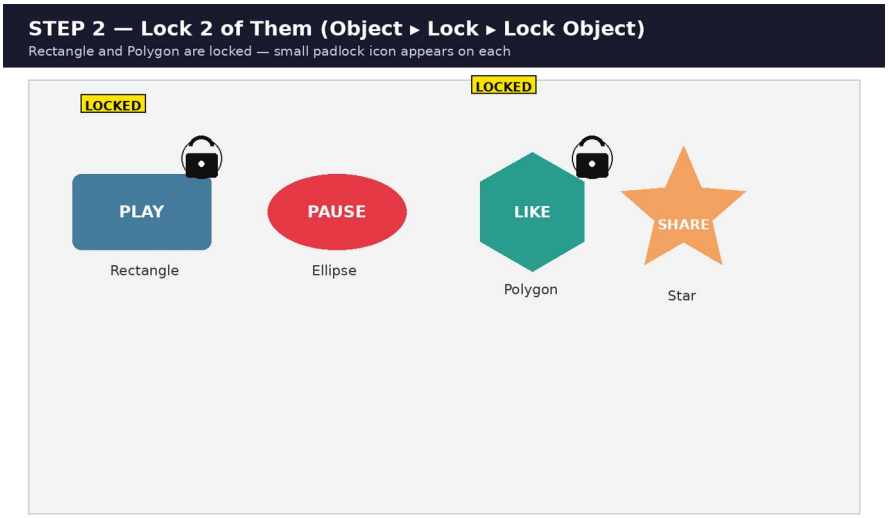

Fig 2.2 — A padlock icon appears on the Rectangle and Polygon after Object ▸ Lock ▸ Lock Object.

Step 3 — Try to Move All Four

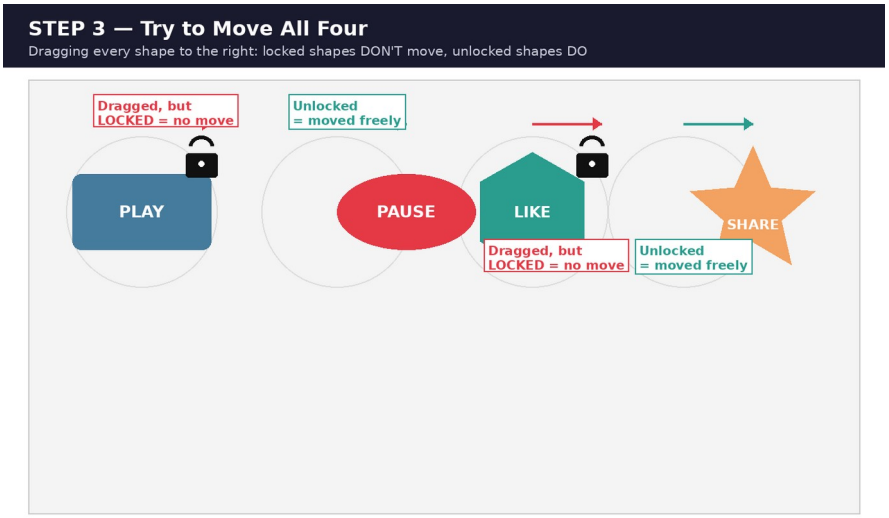

Fig 2.3 — Dragging all four to the right: the locked Rectangle and Polygon don't move; the unlocked Ellipse and Star move freely.

Observation

- Locked objects (Rectangle, Polygon) remained completely fixed in position — CorelDRAW ignores move, resize and most edit attempts on them while locked.
- Unlocked objects (Ellipse, Star) moved normally with the drag, exactly as expected.
- This confirms that Lock Object protects specific elements from accidental changes while you continue editing the rest of the artwork — useful for fixed UI elements like a background or a finalized button you don't want to nudge by mistake.
